- **Excellent opportunity to continue your career with an established industry leader**
- **Receive a competitive salary and a wide host of benefits**
- **Develop yourself professionally and contribute to a growing organization!**

About the Organization

Lake Shore Gold, a subsidiary of Pan American Silver, is located in Timmins, Ontario. The Bell Creek Complex located approximately 20 kilometers northeast of Timmins, Ontario, consists of an underground mine and processing facility. Mineralization is associated with the Porcupine-Destor fault system within the Abitibi greenstone belt, with ore mined by narrow vein longhole stoping methods. Ore is then transported to surface via a modern one thousand eighty metre deep shaft capable of forty-eight hundred tonnes per day.

The milling facility is a conventional free milling gold circuit consisting of crushing, SAG milling, leaching, CIL and CIP, stripping and refining. The mill currently processes up to 232 tonnes per hour from two separate mines and disposes of its tailings via conventional end of pipe discharge. (used only for Mill postings)

The Timmins West mine is located approximately 18 kilometers west of Timmins, Ontario, one of the world's most prolific gold camps. Mineralization is associated with the Porcupine-Destor fault system within the Abitibi greenstone belt. The Timmins West mine is comprised of the Timmins deposit, the Thunder Creek deposit, and the 144 Gap deposit. All three deposits are interconnected by underground drifts.
